Introduction

Drug use is present in nearly all known human societies and groups. Saskatchewan is no exception to this phenomenon.

A 1985 Health and Welfare Canada study found that 77% of Saskatchewan residents 15 years of age and over had consumed alcohol at least once during the previous year and that there were about 46,000 'problem drinkers'[1] province-wide (Health and Welfare Canada, 1985; SADAC, May 1987). With respect to other drug use, the study reported that 6% of the Saskatchewan adult population had used cannabis (marijuana, hashish, hashish oil) at least once in the 12 months preceding the survey, 5% had used sleeping pills, 4% had used tranquillizers , 2% had used stimulants, and roughly 1 in 300 had used cocaine (Health and Welfare, 1985).

A 1986 SADAC study found that 66% of Saskatchewan young people aged 12 to 18 years had consumed alcohol at least once in the year preceding the survey (about 73,000 individuals). It also found that 14% of teens had used cannabis, 6% had used hallucinogens, 4% had used stimulants and 2% had used cocaine on at least one occasion in the preceding year. Other substances such as tranquillizers, barbiturates, PCP, glue/solvents, and heroin were each used by no more than 2% of respondents in the preceding year (SADAC, March 1987; May 1987).

This evidence suggests that drug use in this province is widespread, various and commonplace.

People use drugs for many reasons: for medical purposes, for recreational purposes, to lessen stress, to relieve boredom, or to transcend, if only temporarily, the frustration and pain of daily life. The widespread use of drugs in our society suggests that they provide a common, if less than satisfactory, solution to certain problems experienced by many individuals. Sometimes the results of drug taking are positive and beneficial, at other times they are disastrous, but at all times drug use is a deeply embedded feature of life in contemporary Saskatchewan.

Among the various drugs which are consumed for recreational purposes, alcohol is the most prominent. Alcoholic beverages are readily available and frequently consumed in a variety of settings. And it is alcohol which is the most widely abused and damaging drug in Canada (House of Commons, 1987; Canada, 1988).

Substance abuse, as here understood, is the use of a drug (alcohol, solvents, prescription and non-prescription drugs) to the point of physical or psychological dependence, damage to the user's health, or social or psychological harm (House of Commons, 1987:54).

For an individual, substance abuse is often but one strand of a bundle of interrelated personal, social and economic difficulties. Similarly, for particular social groups within society, substance abuse is frequently interwoven with other problems such as unemployment, poverty and cultural estrangement (House of Commons, 1987:9).

It would be a mistake, however, to assume that substance abuse is a localized problem which affects only young people, the elderly, the disadvantaged or minority groups. The adverse social consequences of substance abuse are many, and although Canadians from all walks of life are not affected equally, all are affected. Such consequences include injury and death on the highways, at home, and during recreational activities; lost productivity in the workplace; the destruction of physical and mental health; violence in many forms; the disruption of friendships, families and communities; and rising expenditures for medical, legal and law enforcement services (Canada, 1988:5).

This report documents some of the legal consequences of substance abuse. Specifically, it provides information about the incidence of 5 major types of alcohol and drug related offences for Saskatchewan communities during 1986. Information and analysis is also provided at a regional, provincial and national level.

Prepared as part of the Premier's Initiatives on Alcohol, Drugs and Youth, this publication has two objectives: first, to document and publicize the legal implications of alcohol and drug abuse; and second, to foster support for and participation in community-based initiatives to prevent, treat and reduce substance abuse.

Report Overview

Part I provides an overview of the incidence of alcohol and drug related offences across Canada, Saskatchewan, and three regions of the province.

Part II provides profiles of alcohol and drug related offences for Saskatchewan communities, as defined by the boundaries of their RCMP detachment. These offence data, obtained from the Canadian Centre for Justice Statistics, the 'F' Division of the RCMP and Saskatchewan municipal police forces, have been organized into the following groups: Liquor Act, drinking and driving, drug, assault and disturbing the peace offences.

Part II also provides a brief overview of how interested individuals, voluntary groups, agencies and institutions might use the profiles for discussion purposes as well as to initiate measures to reduce substance abuse.

Part III consists of a description of the data sources and methods used to prepare this document.

Offence Rates

Using offence rates as a measure of criminal activity must be done cautiously. The number of arrests made by police will vary not only according to the illegal activities of the population, but also according to enforcement practices (CCJS, 1987). Moreover, certain crimes more than others are brought to the attention of the police; for example, in some jurisdictions, sexual assaults are reported to police less frequently than other assault offences (Solicitor General, 1984:3-5).

Profiles

The profiles are by no means exhaustive. Some offences which are indirectly alcohol and drug related, such as some residential break and entries and homicides, have been excluded from the profiles due to technical considerations. As a consequence the profiles present, at most, a partial picture of the many ways that substance abuse is related to law breaking in Saskatchewan.

The profiles nonetheless shed new light on some of the major legal consequences of alcohol and drug abuse. As such, they can serve as a valuable resource for groups and individuals involved in ongoing efforts to prevent, treat and reduce substance abuse.

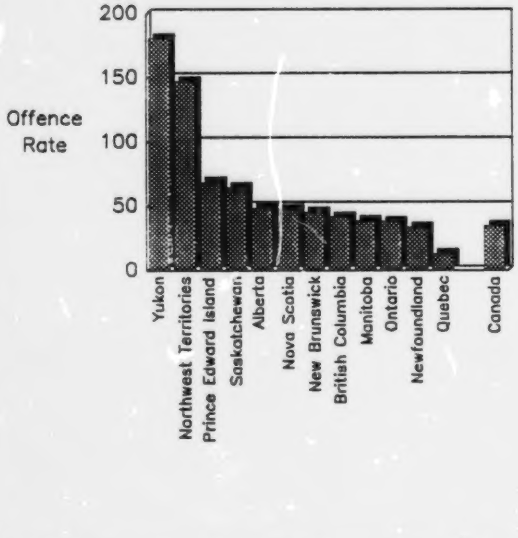
I. The Saskatchewan Profile

1. The National Context

An overview of the incidence of alcohol and drug related offences across Canada, the provinces and the territories follows. Please note that all offence rates are calculated in terms of the number of recorded offences per 1,000 persons aged 15 years and over.

In 1986, 693,120 alcohol and drug related offences, as defined in this report, were recorded by police in Canada. Table 1 and Figure 1 show the number of such offences in Canada, the provinces and the territories in 1986 and rates per 1,000 persons aged 15 and over. Interprovincial comparisons of alcohol and drug related offences must be made cautiously because of variations in legislation and enforcement that exist between jurisdictions. Nevertheless, such comparisons help to situate Saskatchewan offence rates within a broader national context.

Figure 1
Alcohol and Drug Related Offences by Jurisdiction
Canada, 1986



Offence rate: the number of offences per 1,000 persons 15 years and over.

The Yukon and the Northwest Territories, by a wide margin, had the highest rates of alcohol and drug related offences in 1986. The four western provinces, Ontario and three of four Atlantic provinces (P.E.I., Nova Scotia and New Brunswick) also had offence rates above the national average of 34.8 offences per 1,000 persons. Just two provinces - Quebec and Newfoundland - had rates below the national average.

Among the provinces, only Prince Edward Island, with an alcohol and drug related offence rate of 68.8, had a rate greater than the Saskatchewan rate of 64.6 offences per 1,000 persons. Alberta, Nova Scotia, New Brunswick and British Columbia recorded the next highest rates of 48.5, 47.3, 45.4 and 41.6 offences per 1,000 persons respectively. The province with the lowest offence rate overall and for each specific offence group was Quebec, with 12.9 offences per 1,000 persons, a rate roughly one-fifth the magnitude of Saskatchewan's.

The national rate for Liquor Act offences (excluding public drunkenness offences) was 13.0 offences per 1,000 persons. Three provinces - Quebec, British Columbia and Manitoba - recorded rates lower than the national average.

The Canadian drinking and driving offence rate in 1986 was 7.6 offences per 1,000 persons. Three provinces - Quebec, Ontario and Newfoundland - recorded rates lower than the national average. Among the provinces, Alberta, Prince Edward Island and Saskatchewan registered the highest drinking and driving offence rates, 16.4, 14.2 and 12.3 offences per 1,000 persons respectively.

In 1986, the two territories, the four western provinces and New Brunswick registered drug offence rates higher than the national average of 2.8 offences per 1,000 persons.

The Canadian assault rate in 1986 was 8.9 assaults per 1,000 persons. Quebec and the four Atlantic provinces recorded rates lower than the national rate of 8.9.

And finally, three provinces - Quebec, Ontario and Alberta - recorded rates for disturbing the peace which were lower than the national rate of 2.5 offences per 1,000 persons 15 years of age and over.

In summary, only the territories and Prince Edward Island had alcohol and drug related offence rates higher than the Saskatchewan rate of 64.6 offences per 1,000 persons aged 15 and older. As compared to other provinces, Saskatchewan recorded the second highest Liquor Act offence rate, the third highest drinking and driving offence rate, the third highest drug offence rate, the fourth highest assault offence rate and the fifth highest disturbing the peace offence rate.

Table 1
Alcohol and Drug Related Offences
Canada, Provinces and Territories, 1986

Number of Offences

	Liquor Act	Drinking & Driving	Drugs	Assaults	Disturbing the Peace	Total	Population 15 years + (000's)
Newfoundland	5,581	3,061	743	3,554	1,167	14,106	421.5
Prince Edward Island	3,959	1,381	218	599	539	6,696	97.3

Saskatchewan	34.6	12.3	3.2	10.3	4.1	64.6
Alberta	15.9	16.4	3.5	10.5	2.2	48.5
British Columbia	7.1	7.8	5.2	14.2	7.3	41.6
Yukon	50.6	33.9	10.0	43.0	33.2	170.7
Northwest Territories	44.2	19.8	7.9	61.8	13.8	147.5
Canada	13.0	7.6	2.8	8.9	2.5	34.8

Caution: Offence Rates may be due to enforcement practices as well as the activities of the general population.

Note: *Liquor Act* excludes public drunkenness offences. *Drinking and Driving* includes impaired operation of a motor vehicle, boat, vessel or aircraft (causing death, causing bodily harm, and over 80 mgs.) and failure or refusal to provide a breath or blood sample. *Drugs* include possession, prescription drug shopping, trafficking, cultivating, importing, and exporting offences for drugs covered under the Food and Drug Act and the Narcotic Control Act. *Assaults* include *all* assaults level 1, 2 and 3, sexual assaults level 1, 2 and 3, assaults of police officers and other assaults (e.g., unlawfully causing bodily harm, discharging a firearm with intent, and poisoning).

Sources: Canadian Centre for Justice Statistics for offence data, and Statistics Canada (Cat. No. 94-115) for population data.

2. The Social Context

Young, low-income males, especially Natives, are more likely to be offenders and victims of violent offences (excluding sexual assaults) than any other group in the population. And they are even more likely to be imprisoned for their crimes (McCaskill, 1985; Moyer, Kopelman, LaPrairie and Billingsley, 1985; Hylton, 1986; Jackson, 1988; Solicitor General, 1984-1987).

While not all offences are reported to police, only a portion of offenders are prosecuted, and only a portion of those convicted are incarcerated, sentenced offenders admitted to Saskatchewan correctional facilities are disproportionately young, unemployed, poorly educated, male and Native.

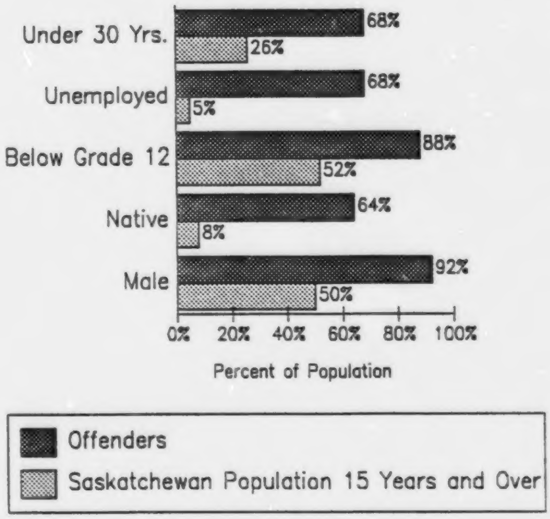
Saskatchewan Offenders

As shown in Figure 2, 68% of 6,781 sentenced admissions to provincial correctional facilities in 1985-86 were under 30 years of age, 68% were unemployed, 88% had less than a Grade 12 education, 64% were Native (Status Indian, Non Status Indian and Metis), and 92% were male (Saskatchewan Justice, 1987).

These percentages are all higher than their comparable proportions in the Saskatchewan population (Statistics Canada, 1986 Census).

Comparable national data on sentenced admissions are unavailable. However, comparable data for Manitoba show that its profile of sentenced admissions to correctional facilities is similar to that of Saskatchewan: 64% of 4,223 sentenced admissions to Manitoba correctional facilities in 1986 were under 30 years of age, 60% were unemployed, 82% had less than a Grade 12 education, 56% were Native and 92% were male (Manitoba Attorney General, 1988).

Figure 2
Offenders Admitted to Correction Facilities:
Selected Characteristics
Saskatchewan, 1985-86



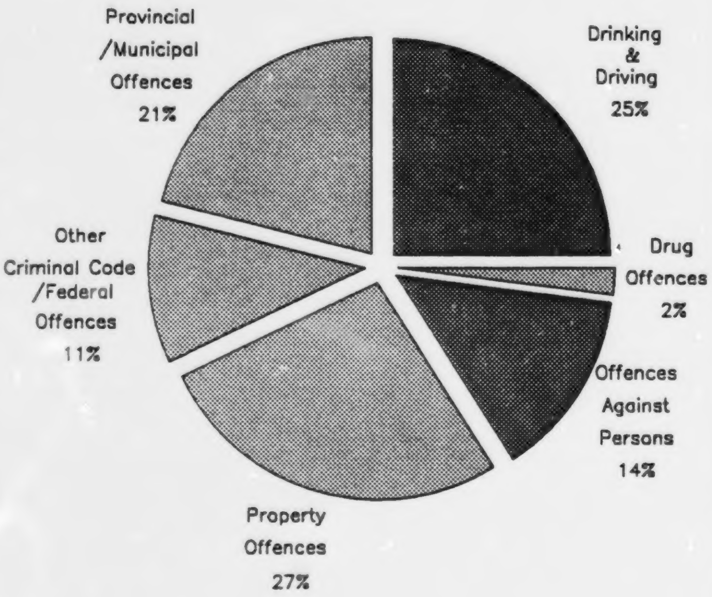
As shown in Figure 3, 25% of admissions to Saskatchewan correctional facilities were for drinking and driving offences, 2% were for drug offences, 14% were for offences against persons, 27% were for property offences, 11% were for other criminal code/federal offences and 21% were for provincial/ municipal offences (of which a significant portion were for Liquor Act offences).

Although the general pattern describing the offenders was similar for all offence groups, there were some notable variations.

For example, compared to the larger inmate population as a whole, sentenced admissions for drinking and driving offences tended to be older, less frequently unemployed, better educated, more frequently non-Native, and less frequently male.

In comparison, sentenced admissions for offences against persons tended to be slightly younger, more frequently unemployed, less likely to have a Grade 12 education and more frequently Native.

Figure 3
Admissions to Correction Facilities by Type of Offence
Saskatchewan, 1985-86



Female Offenders

Although 9 in 10 people incarcerated in 1985-86 for alcohol and drug related offences were men, the socio-demographic profile of women incarcerated for such offences was similar.

Saskatchewan Justice data for 1985-86 show that female admissions to Saskatchewan correctional facilities are also disproportionately young (67% under 30 years of age), unemployed (90% unemployed), poorly educated (95% had less than a grade 12 education) and Native (88% Native).

In 1985-86, 23% of female admissions were for drinking/ driving offences, 2% were for drug offences, 15% were for offences against persons, 31% were for property offences, 13% were for other criminal code/federal offences and 16% were for provincial/municipal offences.

The overrepresentation of Native women among female admissions (88%) is even greater than for Native men among male admissions (62%). This overrepresentation is especially pronounced among admissions for violent offences. Over 96% of women admitted to Saskatchewan correctional facilities for offences against persons (81 of 84) were Native.

The bleak socio-economic situation of Native women coupled with high levels of substance abuse constitute the major factors underpinning this conflict between Native women and the law (Johnson, 1986:57-74).[2]

Native Offenders

The imprisonment of Saskatchewan Native people far out of proportion to their population is indicative of a nationwide situation. As shown in Table 2, Native people constitute a tragically large share of corrections facility admissions in the Yukon, the Northwest Territories, Saskatchewan and Manitoba - and smaller but still sizeable portions in British Columbia, Alberta and Ontario.

Table 2
Natives as a Percentage of Admissions to Provincial Custody
Selected Jurisdictions, 1982/83

	Sentence Admissions			**Fine Default Admissions**			**All Admissions**			**Population**
	Total	**Native**	**% Native**	**Total**	**Native**	**% Native**	**Total**	**Native**	**% Native**	**% Native (1986)**
Ontario	50,253	5,002	10.0%	19,202	3,072	16.0%	69,455	8,074	11.6%	1.9%
Manitoba	2,906	1,317	45.3%	772	386	50.0%	3,678	1,703	46.3%	8.1%
Saskatchewan	5,453	2,976	54.6%	1,761	1,332	75.6%	7,214	4,308	59.7%	7.8%
Alberta	7,215	1,715	23.8%	5,152	1,577	30.6%	12,367	3,292	26.6%	4.4%
British Columbia	11,345	1,793	15.8%	2,043	358	17.5%	13,388	2,151	16.1%	4.4%
Yukon	266	153	57.5%	163	89	54.6%	429	242	56.4%	21.4%
Northwest Territories	1,062	860	81.0%							58.7%

Sources: Admissions data are based on Moyer, Kopelman, LaPrairie and Billingsley (1985) p.2.4 (Ontario, Saskatchewan and British Columbia data refer to 1982/83, Manitoba, Alberta and the Northwest Territories data refer to 1982, and Yukon data refer to 1983); and Native population data are from the 1986 Census, Statistics Canada (Dec. 1987).

As McCaskill has observed:

> The problem of Native criminality is closely tied to the general socio-economic conditions which prevail in most Native communities...and any overall solution to the former situation entails a solution to the latter (1970:20).

In general terms, Native communities experience significantly higher levels of unemployment, poverty, substandard housing, school drop-outs, welfare dependency, illness and disease, suicide, and substance abuse than non-Native communities (DIAND, 1980; WMC, 1985; Statistics Canada, 1984; SADAC, 1988; Clatworthy and Hull, 1983; Siggner 1986; Frideres, 1988; Jarvis, 1987).

But there are grounds for cautious optimism. McCaskill, in a 1985 study for the Correctional Service of Canada, found that marked improvements in social conditions on many Manitoba Indian reserves between 1970 and 1984 were accompanied by a decrease in the overall crime rate in these communities. On this basis, McCaskill concludes that

> as Native communities continue to gain control of their own affairs, improve economically and revitalize their cultures, crime rates may continue to decline (1985:49).

In a similar vein, Terry Thompson, Assistant Deputy Minister of Saskatchewan Justice, in a 1987 address to the Canadian Criminal Justice Association, reasoned that long-term solutions to high crime rates were

> to be found in strategies which provide young people in our society with: stable, caring home environments; an educational system which can enable all students to feel successful; and employment opportunities which are abundant and predictable (1987:6).

Alcohol and Drugs

While it is widely recognized that alcohol and drug abuse are associated with criminality, neither the extent of this association nor its nature has been clearly identified (Brain, 1986; Collins, 1988; Evans, 1986; MacLatchie, 1987; Pernanen, 1976).

Alcohol and drug offences fall into 2 broad categories: those directly related to the violation of a law regulating the use of a substance, such as possession of cannabis; and those indirectly related, such as an assault, where the offence itself has nothing to do with liquor or drug laws, but where the offender is under the influence of alcohol or drugs, or commits the offence in some way because of alcohol or drugs.

Members of the Saskatchewan legal community - regional and senior crown prosecutors, Legal Aid area directors and defense lawyers, and Provincial Court judges - were interviewed in January 1988 to solicit estimates with respect to the proportion of Saskatchewan assault offences which is alcohol related. The results of this survey indicate that province-wide, an estimated 73% of common assaults, 79% of assaults causing bodily harm, 78% of aggravated assaults, 54% of sexual assaults, 85% of assaults of police officers and 74% of other assaults are alcohol related (see Part III of this report for details). Survey results further reveal a clear trend for alcohol to be more frequently associated with violent offences in northern Saskatchewan than in the central and southern regions of the province.

Discussions were also held with representatives of police forces in Saskatoon, Prince Albert, Weyburn and Regina in December 1987 to obtain estimates of the proportion of dangerous driving and disturbing the peace offences which is alcohol related. Police officials estimate that, at a minimum, 70% of dangerous driving offences and 95% of disturbing the peace offences are alcohol related. Therefore, in light of these findings, only that portion of each offence group which is estimated to be alcohol related is included in the Saskatchewan profiles which follow.

No estimates have been provided with respect to the portion of assault, dangerous driving or disturbing the peace offences which is drug related. Clearly, there are some offences which are indirectly drug related in the sense that proceeds from the offence are used to sustain a drug dependency or acquire alcohol or drugs (i.e., some prostitution, break and entry, and robbery offences). But more research is required in order to establish with confidence the nature or extent to which such offences are drug related. However, research conducted elsewhere would suggest that, at most, 10% of violent offences in Saskatchewan are drug related (Johnson, 1986).

Alcohol abuse, although it frequently accompanies violent behaviour, is not, in and of itself, a cause of violence. The standards advocated by Powers and Kotash (1982) to determine whether causal status should be accorded to alcohol abuse are adopted here. For Powers and Kotash, a factor must be both a *necessary* and a *sufficient* condition for a particular event to occur in order for it to qualify as a 'cause'. Consider the phenomenon of partner abuse (an all too prevalent form of assault) in this light.

In the words of Powers and Kotash:

> Alcohol and drugs are not causally related to partner abuse in terms of being necessary or sufficient conditions for the violence. Substance abuse is not a necessary condition, in that a great proportion of the violence occurs in the absence of alcohol or drugs. Substance abuse is not a sufficient condition, for alcohol and drugs are often used without violent occurrence (1982:42).

Alcohol abuse can best be viewed as a 'facilitator' of violence. That is to say that in our culture, alcohol abuse makes it easier for violence to occur, either by blurring the boundaries between what is and what is not acceptable behavior, or by removing conscious recognition of rules governing acceptable behavior altogether (Scott, 1988; Collins, 1988).

In addition, in some instances alcohol or drug abuse may serve as a conscious accompanier of violent behavior in that some offenders use alcohol or drug abuse to excuse a violent act (e.g., some instances of wife battering) (Coid, 1986; Powers and Kotash, 1982).

There is no simple causal relationship between alcohol or drug abuse and violent behavior (Brain, 1986). Patterns of violent behavior are shaped by a host of physiological, psychological, situational and socio-cultural factors. Among the various socio-cultural factors which shape patterns of substance abuse and violence, especially important are gender, age, socio-economic status and ethnicity (Coid, 1986).

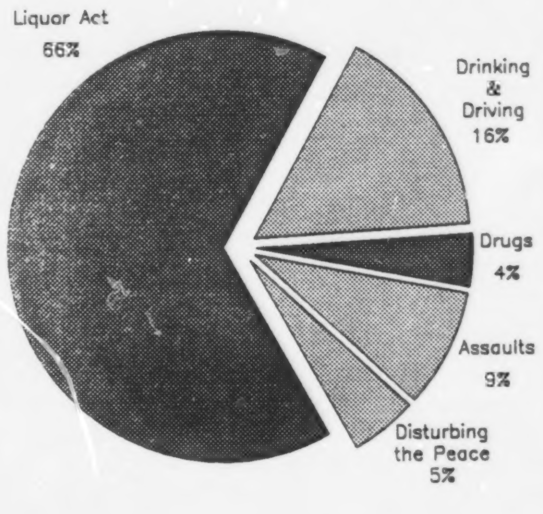
---

3. Saskatchewan Offence Rates

In Saskatchewan in 1986, 61,791 alcohol and drug related offences, as defined in this report, were recorded by police. These alcohol and drug related offences represented 32% of all 192,962 offences recorded in the province in that year.[3]

Of the alcohol and drug related offences, Liquor Act offences accounted for two-thirds (66%) of the total. The next most frequently recorded offences were drinking and driving offences (16%), followed by assaults (9%) and disturbing the peace offences (5%). Drug offences accounted for the remaining 4% of alcohol and drug related offences.

Figure 4
Alcohol and Drug Related Offences by Offence Group
Saskatchewan, 1986



Liquor Act

As shown in Table 3, 65% of Liquor Act offences were for offences such as unlawfully having liquor in a vehicle or drinking in a public place, while the remaining 35% were for public drunkenness.

Drinking and Driving

The vast majority of drinking and driving offences (87%) consisted of the offence of driving a motor vehicle while impaired or having over 80 milligrams of alcohol in the blood. Failing or refusing to provide a breath sample (8%) and dangerous operation of a motor vehicle (4%) were the next most frequently recorded offences. The remaining 2% of drinking and driving offences consisted of a variety of less frequently recorded impaired and dangerous driving offences (see Table 3 for details).

Drugs

As noted above, drug offences represented 4% of all alcohol and drug related offences recorded by police in Saskatchewan during 1986. The Narcotic Control Act (NCA) governs offences related to cannabis, cocaine, heroin and other narcotics, while the abuse of chemical drugs is governed by the Food and Drugs Act (FDA) under Schedule G (controlled drugs) and Schedule H (restricted drugs) (CCJS, 1988:3, 13). Controlled drugs include amphetamine, methamphetamine (speed), barbiturates and others, while restricted drugs include MDA, psilocybin, LSD and others (ARF, 1987; Solomon, 1988; CCJS, 1988).

Of the 2,452 drug offences recorded by Saskatchewan police in 1986, 83% were cannabis offences. The vast majority of such offences involved possession of cannabis (85%), followed by trafficking (including possession for the purpose of trafficking) (13%), cultivating (2%) and importing (0.4%).

'Other' drugs include codeine, pentazocine (e.g., Talwin), phencyclidine (PCP), hydrocodone (e.g., Hycodan), oxycodone (e.g., percs) and others. 'Other' drug offences accounted for 7% of the drug offences recorded by Saskatchewan police in 1986. Almost 89% of 'other' drug offences were for possession (including prescription shopping/double doctoring), 10% were for trafficking (including possession for the purpose of trafficking), and approximately 2% were for importation.

The 146 restricted drug offences recorded in Saskatchewan during 1986 constituted 6% of drug offences registered in the province that year. Sixty-five per cent of restricted drug offences were for trafficking (including possession for the purpose of trafficking) and 35% were for possession.

Cocaine offences represented 3% of drug offences recorded by police in Saskatchewan during 1986. Thirty-five per cent of cocaine offences were for possession, 57% were for trafficking (including possession for the purpose of trafficking), and 8% were for importation.

Table 3
Alcohol and Drug Related Offences
Saskatchewan, 1986

Type of Offence	Offences	Offence Rate	Percent of Offence Group	Percent of All Offences

Caution: Offence Rates may be due to enforcement practices as well as the activities of the general population.

Note: Offence rates are calculated per 1,000 persons 15 years and older. Minor discrepancies in calculations are due to rounding. Only that portion of Dangerous Driving, Assault and Disturbing the Peace offences which are alcohol related are included in the offence totals.

Sources: Canadian Centre for Justice Statistics for all offence data except for public drunkenness offence data which are provided by the 'F' Division of the RCMP and municipal police forces; and Statistics Canada, Health and Welfare Canada and the Saskatchewan Health Insurance Registration Information System for population data.

In 1986, a total of 24 controlled drug offences, all of which were for trafficking (including possession for the purpose of trafficking), were recorded by Saskatchewan police. Such offences represented just 1% of all drug offences recorded that year. Two of the remaining 3 drug offences recorded in 1986 were for possession of heroin, while one was for the importation of heroin (CCJS, Dec. 1987).

Assaults

The Criminal Code includes some 35 assault offence classifications based upon the nature and severity of the assault. For the purposes of this report, these offences have been collapsed into six basic offence groups. These include: assault level 1, assault level 2, assault level 3, sexual assault (levels 1, 2 and 3), assault of a police officer, and 'other' assaults. All totalled, assault offences account for 9% of the alcohol and drug related offences recorded by police in Saskatchewan in 1986.

Assault level 1 (common assault) consists of "the intentional application of force to the person of another without his[/her] consent, or the attempt or threat by act or gesture to apply force to another, if the other believes one has the apparent, present ability to do so" (Yogis, 1983:20). Over half (58%) of the estimated 5,778 alcohol related assault offences recorded in Saskatchewan during 1986 consisted of assault level 1 offences.

Assault level 2 (assault with a weapon or assault causing bodily harm) consists of assault with "a) a weapon, threats to use a weapon or imitation thereof, or b) assault causing bodily harm". Bodily harm, as defined by case law, refers to "a hurt or injury to the victim which interferes with his[/her] health or comfort; it need not be permanent but must be more than merely transient or trifling in nature". Assault level 2 offences accounted for 22% of the alcohol related assaults recorded by Saskatchewan police in 1986.

Assault level 3 (aggravated assault) is committed when, in the process of committing an assault, one "wounds, disfigures or endangers the life" of the victim (CCJS, 1986:7.6). Assault level 3 offences represent just 3% of the alcohol related assaults registered in Saskatchewan in 1986.

Sexual assault, as defined by the courts, is said to include "an assault with the intention of having sexual intercourse with the victim without her consent, or an assault made for the purpose of sexual gratification". The courts have elsewhere referred to sexual assault as constituting "an act of force in circumstances of sexuality". They stress that sexual assault is "not a matter of anatomy but rather if there has been a real affront to sexual integrity and dignity" (Heather, 1987:6.44). There are three levels of sexual assault: sexual assault level 1, sexual assault level 2, and sexual assault level 3. Sexual assault offences, as a group, were the third most common form of alcohol related assault recorded in 1986 (constituting 8% of assault offences), despite the fact that sexual assaults are less likely to be alcohol related than other types of assault offences (Saskatchewan legal community respondents estimate that just over half (54%) of sexual assaults are alcohol related).

The offence of assaulting a police officer entails the assault of an officer "engaged in the execution of his[/her] duty" (Heather, 1987:6.43). Of all the alcohol related assault offences recorded during 1986 in Saskatchewan, 4% were for assaulting a police officer.

'Other' assaults, for the purpose of this report, refer to a variety of assault offences. These include: unlawfully causing bodily harm; discharging a firearm with intent to wound, harm, or disfigure, endanger the life or prevent the arrest of any person; assaulting a public/peace officer; and other comparatively rare offences such as administering a noxious thing, attempting to choke, suffocate or strangle, administering drugs, assault with intent, interfering with transportation facilities, and setting or placing traps likely to cause bodily harm (CCJS, 1986:7.7). 'Other' assaults, as a group, accounted for 5% of the alcohol related assaults recorded in Saskatchewan during 1986.

Disturbing the Peace

The final offence included in the Saskatchewan profiles is disturbing the peace, an offence estimated by police to be alcohol related 19 times out of 20. Disturbing the peace entails causing a disturbance in or near a public place "by fighting, screaming, shouting, swearing, singing, or using insulting or obscene language", "by being drunk", or "by impeding or molesting other persons" (Heather, 1987:4.14). This offence accounted for the remaining 5% of alcohol and drug related offences reported in Saskatchewan during 1986.

Summary

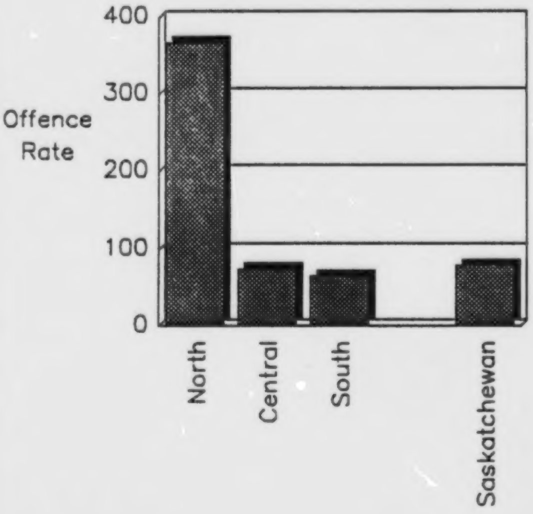
In summary, an estimated 61,791 alcohol and drug related offences were recorded by police in Saskatchewan in 1986. Liquor Act offences accounted for 66% of such offences, followed by drinking and driving offences (16%), alcohol related assaults (9%), and alcohol related disturbing the peace offences (5%). Drug offences, the majority of which were cannabis related (83%), accounted for the remaining 4% of alcohol and drug related offences recorded by police in Saskatchewan during 1986.

4. Regional Offence Rates

Table 4 provides the number of alcohol and drug related offences for each of the three SADAC Divisions in 1986 and rates per 1,000 persons aged 15 and over.

Figure 5 shows the overall rates for each division.

Figure 5
Alcohol and Drug Related Offences by SADAC Division
Saskatchewan,1986



Offence rate: the number of offences per 1,000 persons 15 years and over.

SADAC Divisions

The Northern Division of SADAC encompasses the sparsely populated northern half of the province(population aged 15 and over - 25,300) and includes smaller urban centres such as Meadow Lake, Creighton and La Ronge; the Central Division encompasses the South-Central quarter of the province (population aged 15 and over - 374,600) and includes urban centres such as Saskatoon, Prince Albert, North Battleford, Lloydminster and Melfort; and the Southern Division encompasses the southern quarter of the province (population aged 15 and over - 381,200) and includes urban centres such as Regina, Moose Jaw, Swift Current, Yorkton, Estevan and Weyburn.

SADAC Divisons are illustrated in Part II, which presents a map of Saskatchewan broken down by SADAC Divisions and by RCMP detachment.

Northern Division

Offence rates were significantly higher in northern Saskatchewan than in the central and southern parts of the province in 1986. The 1986 SADAC Northern Division offence rate, at 366.8 offences per 1,000 persons, was 4.9 times greater than the Central Division rate of 74.4, and 5.7 times greater than the Southern Division rate of 64.7.

Northern Division offence rates were higher, in some instances much higher, than comparable provincial rates across every offence group. Liquor Act, drinking and driving, drug and assault offence rates in the Northern Division of SADAC were 5.2, 3.0, 1.6, and 5.7 times higher than comparable provincial rates. In addition, the Northern Division disturbing the peace offence rate was 3 times higher than the provincial rate for this offence.

While direct comparisons with other jurisdictions must be made with caution for reasons discussed earlier, it would appear that Northern Saskatchewan offence rates share more in common, both in magnitude and composition, with Yukon and Northwest Territories offence rates than with rates in other parts of the province.

Whereas Native people comprise a small minority of the population in the Central and Southern Divisions of SADAC, and 8% of the population of the province as a whole, they comprise roughly two-thirds of the population of the north of the province (Statistics Canada, Dec. 1987; Signe, 1986). As a recent report prepared on behalf of the Canadian Bar Association notes, high crime rates are but one item on a lengthy list of costs associated with the marginalization of Canadian Aboriginal people (Jackson, 1988:6).[4]

Central Division

With just one exception, Central Division offence rates were slightly lower than comparable provincial rates. Central Division rates for Liquor Act, drinking and driving, drug and assault offences ranged from a low of 84% of the provincial rate in the case of drug offences, to a high of 97% of the provincial rate in the case of assault offences. The Central Division disturbing the peace offence rate, at 4.9 offences per 1,000 persons, was 29% higher than the provincial rate.

Southern Division

In the case of the Southern Division of SADAC, a similar pattern prevailed. Southern Division rates for Liquor Act, drinking and driving, assault and disturbing the peace offences ranged from a low of 58% of the provincial rate in the case of disturbing the peace offences, to a high of 90% of the provincial rate in the case of drinking and driving offences. The Southern Division drug offence rate, in contrast, was 16% higher than the provincial rate, with a higher incidence of cannabis offences accounting for much of this difference.

5. Saskatchewan Offence Trends: 1982 - 1986

SADAC's first systematic investigation of alcohol related offences, with the calendar year of 1982 as its focus, was completed in 1984 (SADAC, 1984). The section which follows compares 1982 Saskatchewan alcohol and drug related offence rates with 1986 rates.

Table 5
Alcohol and Drug Related Offences
Saskatchewan, 1982 and 1986

Type of Offence	**1982** Offences	**1982** Offence Rate	**1986** Offences	**1986** Offence Rate	**1982-1986** % Change in Offences	**1982-1986** % Change in Offence Rate

Total Offences	**66,478**	**90.0**	**61,791**	**79.1**	**-7%**	**-12%**
Population 15 Years & Over	738,700		781,100			

Caution: Offence rates may be due to enforcement practices as well as the activities of the general population.

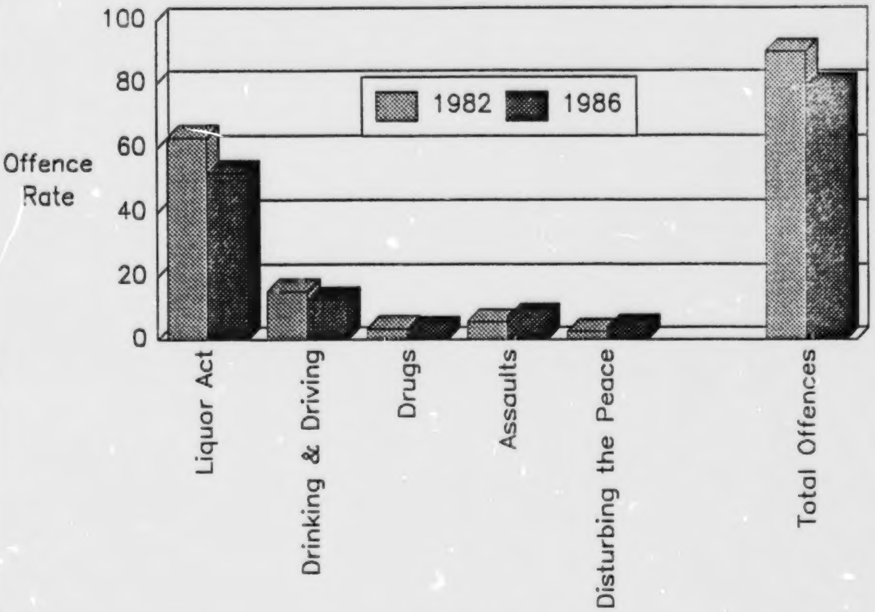
Note: *Offence rates* are calculated per 1,000 persons 15 years and older. Minor discrepancies in calculations are due to rounding. In 1982, *Impaired Driving* included driving while impaired and driving with more than 80 mgs. of alcohol in blood offences. In 1986, *Impaired Driving* included Impaired Operation of a Motor Vehicle, Vessel or Aircraft (causing death, causing bodily harm, and over 80 mgs.). In 1986, *Failing or Refusing to Provide Breath Sample* included Failing or Refusing to Provide a Blood Sample offences. In 1982, *Dangerous Driving* included 70% of criminal negligence (causing death, causing bodily harm, operating motor vehicle) and dangerous driving (Criminal Code) offences. In 1986, *Dangerous Driving* included 70% of Dangerous Operation of a Motor Vehicle (causing death, causing bodily harm, dangerous operation) offences. In 1982, *Assaults* included rape, indecent assault, common assault, assault with intent, assault police officer, assault bodily harm, wounding and other assaults. In 1986, *Assaults* included assaults level 1, 2 and 3, sexual assaults level 1, 2 and 3, assault police officer and other assaults. See CCJS (1984) for details regarding 1982 offence classifications and CCJS (1987) for details regarding 1986 classifications. Based on the results of SADAC's 1988 survey of the Saskatchewan legal community, 73% of all assaults are included. Thus, there were a total of 5,570 assaults (including rape) in 1982, and 7,902 in 1986. *Disturbing the Peace* included 95% of reported offences in both years.

Sources: Canadian Centre for Justice Statistics for all offence data except for public drunkenness offence data which are provided by the 'F' Division of the RCMP and municipal police forces; Statistics Canada for 1982 population data; and Statistics Canada, Health and Welfare Canada and the Saskatchewan Health Insurance Registration Information System for 1986 population data.

Changes 1982-1986

Table 5 and Figure 6 show that between 1982 and 1986, the *number* of alcohol and drug related offences recorded in Saskatchewan declined by 7% while the provincial alcohol and drug related offence *rate* fell by 12%. This trend was not uniform across all offence groups, however. The offence group registering the largest decrease was drinking and driving offences (-13%), followed by Liquor Act offences (-13%) and drug offences (-6%). Assault offences, in contrast, rose by 42%, and disturbing the peace offences increased by 56%. The corresponding reduction in offence rates was 18% in the case of drinking and driving offences, 17% for Liquor Act offences, and 12% for drug offences. Assault and disturbing the peace offence rates, in contrast, rose by 35% and 46% respectively.

Figure 6
Alcohol and Drug Related Offence Rates
Saskatchewan, 1982 and 1986



Offence rate: the number of offences per 1,000 persons 15 years and over.

Drinking and Driving

The fall in the drinking and driving offence rate is especially encouraging, and indicative of a long-term trend in evidence across Canada. Between 1981 and 1987, the number of *charges* for drinking and driving in Canada decreased by 25% from a record high of 162,048 in 1981, to 128,500 in 1987. The 1987 total represents the lowest figure recorded since the federal government commenced publishing annual figures in 1974 (CCJS, Sept. 1988:1).

Such a reduction is the product of a variety of developments, perhaps none more important than a deepening public awareness of the costs and consequences of drinking and driving, an awareness brought about through the combined efforts of police forces, schools, community groups, the courts, the media and governments at all levels.

Nonetheless, driving while impaired remains "a major cause of accident, injury and death on the nation's roadways" and a serious social problem (CCJS, Sept. 1988:1). On any given day in 1987/88, about 150 people (representing 10 - 12% of the total inmate population) are incarcerated in provincial correctional facilities for impaired driving offences (Saskatchewan Justice, Sept. 1988).

On the basis of roadside surveys, the Road Transportation Directorate of Transport Canada estimates that nationwide, "one in four drivers on the road on a weekend evening has been drinking and one in 20 or 25 is legally impaired by the effects of alcohol" (CCJS, Sept. 1988:1). And the problem is especially serious during the early morning. In 1987, 14% of Saskatchewan drivers surveyed between 1:30 and 3:00 a.m. on a weekend were legally impaired as compared to 1% of those on the road between 9:00 and 10:30 p.m. (SGI, 1988). In addition, Saskatchewan Highways reports that in Saskatchewan during 1987, alcohol was involved in 7% of motor vehicle accidents involving property damage (1,947 of 27,884), 16% of accidents involving personal injury (995 of 6,156), and 49% of accidents involving fatalities (94 of 193) (TAIS, 1988:44).

Drugs

Comparing 1982 with 1986 drug offence rates reveals that cannabis offences make up a declining majority of drug offences known to police: in 1982, 89% of drug offences reported in Saskatchewan involved cannabis, falling to 83% in 1986. Among the other categories of drug offences, only heroin offences registered a reduction, while cocaine and controlled drug offences registered the largest percentage increase.

Assault and Disturbing the Peace

Assault and disturbing the peace offence rates, as noted above, rose substantially between 1982 and 1986. A full accounting of the reasons for this increase is beyond the scope of this report. At this juncture, it is difficult to determine whether this rise in the incidence of assaults and disturbing the peace offences constitutes an actual increase in the total number of such offences, or an increase in the proportion of such offences which is reported to police. It would appear, however, that there is a greater willingness on the part of the public to report some offences (e.g., instances of wife battering) in 1986 than in 1982. In addition, there have been major changes in legislation and law enforcement practices pertaining to sexual assaults, partner abuse and offences involving young offenders.[5]

Summary

In summary, Saskatchewan experienced a 7% reduction in the number of alcohol and drug related offences reported between 1982 and 1986 (from 66,473 offences in 1982, to 61,791 offences in 1986), and a 12% reduction in the offence rate (from 90.0 offences per 1,000 persons aged 15 and over in 1982 to 79.1 offences per 1,000 persons aged 15 and over in 1986). A variety of factors - changes in legislation and law enforcement practices, coupled with increased activity to counteract substance abuse - are thought to be the key factors underpinning such a reduction.

Part I - Footnotes

1. 'Problem Drinkers' were identified by their reported drinking patterns in the week preceding the survey. They included heavy, binge and high volume drinkers, each of which is defined below:

   a. Heavy Drinker: one who consumed alcoholic beverages on at least 4 of the past 7 days, and, on at least one of these occasions, consumed heavily (8 or more drinks, if male; 4 or more drinks if female); or: one who consumed alcoholic beverages on at least 3 of the past 7 days, and, on at least two of these occasions, consumed heavily. Heavy drinkers represented about 60% of problem drinkers.

   b. Binge Drinker: one who was not a heavy drinker, but on at least 1 of the last 7 days, consumed 12 or more drinks, if male, or 8 or more drinks, if female. Binge drinkers represented about 30% of problem drinkers.

   c. High-Volume Drinker: one who was not a heavy drinker, nor a binge drinker, but who in the last 7 days, consumed a total of more than 21 drinks, if male, or 14 drinks, if female. High-volume drinkers represented about 10% of problem drinkers (SADAC, May 1987).

2. See Adelberg and Currie (1987) and House of Commons (1988) ch. 16.

3. The 192,962 offences recorded in Saskatchewan in 1986 include: 155,520 offences published by CCJS (1987:2) (this total does not include public drunkenness and traffic offences); plus 23,104 traffic offences recorded by CCJS (Dec. 1987:8) in unpublished data; plus 14,338 public drunkenness offences recorded by Saskatchewan police forces.

4. See Berger (1977), Johnson (1986), Simons (1987), Verdun-Jones and Muirhead (1980), Hylton (1986), Fiddler (1988) and Irwin (1988).

5. Consult Chappell and Hatch (1986), Johnson (1988), and Brantingham (1987) for an overview of current knowledge with regard to trends in violent crime in Canada and abroad.

II. Community Profiles

This section consists of profiles of the incidence of 5 major groups of alcohol and drug related legal offences for 118 Saskatchewan communities as defined by the boundaries of their RCMP detachment.

The profiles are presented in alphabetical order by SADAC division, beginning with the Southern Division and proceeding northward.

For purposes of comparison, the 118 police jurisdictions examined have been designated as having a high, medium, or low level of risk of encountering alcohol and drug related legal offences. Communities (and surrounding areas) with a 1986 alcohol and drug related legal offence rate of greater than 90 offences per 1,000 persons 15 years and over constituted the third of communities with the highest risk, those with an offence rate greater than 53.7 but less than 90 constituted the third with a medium level of risk, and those with an offence rate less than 53.7 offences per 1,000 persons 15 years and over constituted the third with the lowest level of risk.

When comparing offence rates between communities, readers are reminded that first, offence rates are a product of enforcement practices as well as the activities of the general population; and second, that modest changes in the number of offences in a given jurisdiction from year to year can result in significant fluctuations in offence rates.

Community Responses

This publication is intended to convey a clearer sense of the scope of the legal consequences of alcohol and drug abuse in Saskatchewan. Readers are encouraged to compare and contrast offence rates in their community with those which prevail elsewhere - in other communities, in other parts of the province, and across Canada.

At present, two major federal-provincial initiatives are in place to counteract the problem of substance abuse: the National Drug Strategy, unveiled in May 1987, and the National Program on Impaired Driving, introduced about the same time.

Under the National Drug Strategy, a 5 year, $15.6 million Community Action Program was created. This program, jointly administered by Health and Welfare Canada and provincial and territorial addictions agencies, was put in place to enable individuals, community groups and provincial organizations to establish new prevention, awareness and treatment programs (Canada, 1988).

As its name suggests, the National Program on Impaired Driving focuses on the drinking and driving issue. Aimed primarily at young people aged 16 to 24, the objective of the program is to bring about meaningful and lasting changes in attitudes toward driving while impaired. During the course of the program's first five years of operation, $7 million in funding will be provided nationwide for community-based initiatives aimed at reducing the incidence of driving while impaired.

In addition to the above programs, the province has implemented a number of new initiatives in treatment, education and awareness. To help reduce the consequences of alcohol and drug abuse, the budget for provincial alcohol and drug programming through SADAC has doubled since 1985/86.

New provincial inpatient and outpatient facilities, community counselling resources, education, training and media campaigns have been directed at reducing the criminal and community problems associated with substance abuse.

Community mobilization plays a vital role in counteracting substance abuse and promoting healthy lifestyles. Community groups, for example, have done much to draw attention to the injuries and deaths produced by impaired drivers and to the personal tragedy of victims and their families. This publication will provide support to such groups.

School-based initiatives such as peer support programs, which assist young people to develop decision-making and communication skills, are another example of programs which could make good use of the profiles in this report. Other parent and professional awareness programs could do likewise.

With the co-operation of local and regional media - print, radio and television - the profiles could be used very effectively during Drug Awareness Week (held annually each November) as well as throughout the year to bring home the point that substance abuse is not merely 'somebody else's problem', but one which affects the well-being of all community members.

To promote community participation in counteracting alcohol and drug abuse problems, community grants are available through Saskatchewan Health's *Everyone Wins* campaign. Technical assistance, audiovisual and literature resources are also available to communities wishing to implement innovative health projects.

Students', women's, church, aboriginal, seniors', labour, farm, business, professional, parent and youth groups, service clubs, schools, libraries and numerous other voluntary groups can all make a valuable contribution to the ongoing process of reducing the incidence of substance abuse through working together for stronger and safer communities.

III. Data Sources and Methodology

The National Overview

The data used in the calculation of national, provincial and territorial alcohol and drug related offence rates (shown in Table 1) are drawn from 2 sources. The population figures are from the 1986 census, and the offence data are gleaned from the Uniform Crime Reporting System (UCR) maintained by the Canadian Centre for Justice Statistics (CCJS).

The UCR data set describes "the first stage of the criminal justice process - contact between police and offenders" and is subject to several limitations (CCJS, May 1988: 1). First, and perhaps most obvious, it excludes offences which are undetected or not reported to police. The 1982 Canadian Urban Victimization Survey (CUVS), conducted on behalf of the Ministry of the Solicitor General, estimated that, for a variety of reasons, 38% of sexual assaults, 45% of robberies and 34% of assaults in 7 major urban centres (Toronto, Vancouver, Edmonton, Winnipeg, Halifax-Dartmouth and St. John's) were reported to police (Solicitor General, 1984:3). If a similar trend prevails in Saskatchewan, roughly one-third of assaults are reported to police.

A second limitation of the UCR data set arises as a consequence of the procedures used to assemble offence data (all UCR offence data cited in this report are actual offences, that is, offences known to police which investigation has proved to be founded). The UCR data set counts incidents known to police as well as persons charged with respect to those incidents. However, in the event that one incident contains several violations of the law, only the most serious offence is recorded. Thus, for example, a Liquor Act offence which occurs in conjunction with a more serious violent offence will not be counted in the UCR statistics. Similarly, if more than one drug offence occurs in the same incident (eg, possession of one drug and trafficking in another), only the most serious offence will be recorded. The UCR data do not, therefore, "represent a full count of known violations of the law" (CCJS, May 1988:2).

Lastly, the UCR data are "directly affected by local police enforcement practices and priorities" (Johnson, 1986: Appendix 1:1). It is widely recognized that variations in offence rates may be the result of variations in enforcement practices as well as the activities of the general population (Black, 1980; Lundman, 1980; Mayhew and Smith, 1985; Johnson, 1986).

The Provincial Overview

The data presented in the Provincial Overview section (shown in Table 3) are from several sources. With the exception of the public drunkenness data, offence data are from CCJS. The public drunkenness data, which are not compiled by CCJS, were obtained from the 'F' Division of the RCMP and the 17 Saskatchewan municipal police forces in response to a December, 1987 SADAC request for such information.

The detachment, SADAC divisional and provincial offence rates were calculated using Saskatchewan Health Insurance Registration Information Systems Unit (HIRIS) population data, augmented with population data from Statistics Canada and Health and Welfare Canada. The HIRIS data are based on the postal code of individuals issued a Saskatchewan Health Services Card.

On the basis of information contained on the cards, HIRIS publishes an annual estimate of the covered population of the province. With one notable exception - the place of residence of the Registered Indian population of the province - the HIRIS data set provides a fairly accurate estimate of the size of the Saskatchewan population according to place of residence, age and sex.

However, Saskatchewan Registered Indians, by virtue of their constitutional status as an Aboriginal people, are categorized by Band membership rather than place of residence. Thus, although one-third or more of the Saskatchewan Registered Indian population resides off-reserve, the HIRIS data set does not categorize band members according to residence.

Therefore, following discussions with officials from Health and Welfare Canada, Indian and Northern Affairs Canada, and the Aboriginal People and Native Issues Unit of Statistics Canada, several modifications to the HIRIS data set were made.

First, the HIRIS Registered Indian population counts were replaced with 1986 census on-reserve figures.

Second, since Regina, Saskatoon, Prince Albert, North Battleford and Yorkton constitute the principal Saskatchewan destinations for persons moving off reserve (Clatworthy and Hull, 1983), the HIRIS population counts for these urban centres were substituted with 1986 census figures.

Third, because accurate Statistics Canada population figures were unavailable for four eastern Saskatchewan reserves, the HIRIS population counts for these Bands were substituted with 1987 Health and Welfare population figures. Consult SADAC's technical report *The Size and Location of the Indian Population of Saskatchewan: A Review of Four Data Sources* (SADAC, 1989) for a review of alternate sources of population data on the Indian population of Saskatchewan.

And fourth, although Lloydminster and Creighton-Flin Flon straddle the Saskatchewan-Alberta and Saskatchewan-Manitoba borders respectively, both centres are policed, in part, from Saskatchewan. Therefore, the Alberta portion of Lloydminster and the Saskatchewan portion of Flin Flon were added to their respective detachment population totals.

As discussed elsewhere in this report, only that portion of dangerous driving, assault and disturbing the peace offences estimated to be alcohol related is included in the profiles.

Table 6 presents the specific percentage of recorded offences, by SADAC Division, which were used.

Table 6

Legal and Law Enforcement Community Estimates Regarding the Proportion of Alcohol Related Legal Offences

by SADAC Division, 1988

Offence	**SADAC Division**			**Saskatchewan**
	North	**Central**	**South**	
Dangerous Driving	70.0	70.0	70.0	70.0
Assault 1	76.3	73.8	71.0	73.3
Assault 2	85.7	79.1	76.3	79.4
Assault 3	86.3	82.8	74.2	78.0
Sexual Assaults	63.8	63.9	40.0	54.2
Assault Police	91.3	85.0	80.7	84.5
Other Assaults	72.5	77.2	63.5	74.3
Disturbing the Peace	95.0	95.0	95.0	95.0

Source: January 1988 interviews with 25 members of the Saskatchewan legal community (Legal Aid area directors and defense lawyers, Justice regional and senior crown prosecutors, and Provincial Court judges) for assault offences; and December 1987 discussions with Regina, Saskatoon, Prince Albert and Weyburn police officials for dangerous driving and disturbing the peace offences.

SADAC INFORMATION REQUEST

Legal Offences

In addition to this publication, SADAC has prepared a supplementary set of profiles which provide a more detailed breakdown of alcohol and drug related offences by community.

SADAC also periodically conducts workshops and seminars on a wide range of substance abuse issues of interest to people from many walks of life - youth, parents, caregivers, teachers, children of alcoholics, employers, unions, professional groups and others.

If you would like more information, please complete and return the form below.

____ I would like more information about the number of alcohol and drug related offences in the community(ies) of:

____

____ I would like more information about other SADAC Programs.

Name ____

Agency ____

Position ____

Address ____

____

Postal Code ____________________ Telephone ____________________
